### **About the Seminar:**

**Polycystic ovary syndrome**, or **PCOS**, is the most common endocrine disorder in women of reproductive age. The syndrome is named after the characteristic cysts which may form on the ovaries, though it is important to note that this is a symptom and not the underlying cause of the disorder.

Women with PCOS may experience irregular menstrual periods, heavy periods, excess hair, acne, pelvic pain, difficulty getting pregnant, and patches of thick, darker, velvety skin. The primary characteristics of this syndrome include: hyperandrogenism, anovulation, insulin resistance, and neuroendocrine disruption.

The seminar would look into the lifestyle measure that today's women may adopt to minimize the risk of getting PCOS.
